Abstract (en)

[origin: EP2664712A2] The wall element (1,2) has an elongate portion that is provided with two end portions (3). The end portions are connected with wall elements through connecting element. The latch (30) and slot (32) are cooperated with one another when inserting latch into slot. A locking portion (18) is formed beyond the height of an upper edge (20) of elongate portion. The mandrel (22) is provided in cross piece (24) and connected with the mandrel retainer. The mandrel is formed in cross piece with respect to mandrel retainer so that the respective mandrel engages with respective mandrel retainer.
