Abstract (en)
[origin: EP2664735A1] The door clamp (1) has a side wall of a commercial vehicle structure that is adjustable between an inoperative position and a use position of a locking lever (5). The locking lever is connected to the housing (3) through a spring (13). The locking lever in the use position is pulled against the restoring force of the spring partially out of the housing. The locking lever with a shank portion (4) is provided with a cavity. The spring in the inoperative position of the locking lever is partially arranged in the cavity of the shank portion.
