Abstract (en)

[origin: EP2665214A1] Method of detecting a jamming transmitter, affecting a communication user equipment, wherein said communication user equipment (UE) is adapted for communication with a component of a cellular radio network (RN) having a number of user equipments (UE) and a number of base stations (BNS) for communication in a communication band on a communication channel of predetermined frequency range, providing the user equipment (UE) in a start up mode for achieving a connected mode of a communication radiolink with the component of the radio network (RN), wherein in the start up mode of said user equipment (UE) it is determined that a connected mode of the communication radiolink cannot be established, and wherein jamming detection steps are provided.
