Abstract (en)  
[origin: WO2012098379A1] An edge protector which can be applied to complex curved edges without on-site adaptation has interconnected elements 2 aligned in a longitudinal direction. Each of the elements has first and second opposing side walls 3 and 4 joined by an end wall 5 and an intermediate wall 6 to form a box section 7, and opposing faces of the side walls 3 and 4 which project beyond the box section are each provided with elastomeric gripping projections 8 and 9. Adjacent pairs of elements are spaced apart to form a gap 1 and interconnected by an integral hinge connection between one of said side and end walls 3, 4 or 5. A single edge protector may include adjacent pairs of elements interconnected by hinge connections between one of their side walls 3, 4 and adjacent pairs of elements interconnected by hinge connections between their end walls 5 allowing the edge protector to be manually manipulated in two mutually perpendicular planes.
