Abstract (en)

[origin: WO2012097890A1] The invention relates to a method for producing a component having at least one functional element, comprising the steps of: providing a substrate; enriching a plasma jet with material of the at least one functional element to be formed, and applying at least one functional element to the substrate by applying material in at least substantially liquid form, bonding it to the substrate, and solidifying it by means of the enriched plasma jet.
