Abstract (en)

[origin: WO2012098307A1] The invention relates to an air-intake line for a combustion engine (M), comprising, in the following order, on a main branch: an air filter (1) provided with a casing; a turbocharger compressor (2); and an air-metering valve (3), wherein the line further comprises a recirculation branch (4) bypassing the main branch between the downstream and upstream portions of the compressor (2), and a release valve (5) capable of blocking or enabling the flow of a fluid in the recirculation branch (4), characterized in that a first end (41) of the recirculation branch (4) is connected to the main branch via the air-filter (1) casing. The invention also relates to an air-filter casing that is advantageously shaped so as to implement such an air-intake line, and to a motor vehicle (V) comprising such an intake line.
