Abstract (en)

[origin: WO2012100158A1] An account opening computer system is configured to provide a flexible front end user interface, separating and decoupling the computer implemented user journey from computer implemented business process(es). The flexible front end user interface includes a plurality of portlets and a component-based object-oriented flow configuration to configure and/or navigate the flow of display screens. Various embodiments are described, including a computer implemented method of account opening using a flow configuration.
