Abstract (en)

[origin: EP2666529A1] A device (1) for actuating a switch (2) for a model railroad, comprising: a support body (25) constrainable to a switch (2) for a model railroad; a trolley (31) slidably associated with said support body (25) and movable between a first and a second position along a direction substantially transverse to points (7) of said switch (2); said trolley (31) being constrainable to said points (7); a motor (41) associated with said trolley (31); a transmission member (39) operatively placed between said motor (41) and said trolley (31) for transferring at least one sliding motion from said motor (41) to said trolley (31); said transmission member (39) being alternately switchable between a first configuration in which the trolley (31) is movable from the first to the second position and a second configuration in which the trolley (31) is movable from the second to the first position.
