Abstract (en)

[origin: EP2666740A2] The bobbin has a case retainer (3) that is displaced against the effect of a burden portion into an open position along axial direction. A coil frame (1) is provided with a movable spacer that provides spacing between the case retainer and a driving roller (8). The movable spacer arranged in the coil frame is limited by the fix element so that the spacer supports the coil frame on a fixed portion of working premises. A clamping device (13) is connected with the spacer.
