Abstract (en)

[origin: EP2666919A2] The method involves introducing a pre-drilled hole (18) into an outer hard material layer (3) of a hollow fiber combination insulation board (2) in a measure of a core (19) of a sleeve-like holding element (6) and a tube piece (10). The holding element is inserted wider into the hole until an idle threaded end of a spiral screw thread (9) comes in contact to the outer, hard material layer. The holding element is screwed into the hard material layer by an assembly tool until a top board (7) rests on the hard material layer. The tube piece is brought in contact to a substrate (5). An independent claim is also included for a mounting system for attachment of insulation boards or an insulation material at a substrate.
