Abstract (en)  
A wall assembly device (37) of coating panels (P) comprises, in combination: a base (21) suitable for being fixed to said panel (P) and a plate (33) suitable for being fixed to said wall (37), wherein between said base (21) and said plate (33) there are regulation means for regulating said panel (P) in height (vertical). According to the invention, said regulation means consist of a screw (27) housed on the base (21), said screw (27) reacting directly against the plate (33), without the intervention of another moving component.
