Abstract (en)
[origin: EP2666947A2] The tape has barrier layer (5) that is formed of material difference from foam material, and is partly extended over cross-section of foam material main portion (4). The barrier layer is partly extended over main portion along height direction in such a way that the barrier layer is arranged in recess (6) of main portion. The web (7) interconnects barrier layer and opposing sections (4a,4b) of main portion. The barrier layer is extended between broad sides (2) of main portion along height direction so that air permeability of tape is reduced over less than 80%.
