Abstract (en)

[origin: EP2667121A2] The device (26) has an inlet aperture (32) extended for feeding liquid into a container (14) into a direction. A discharge rib for discharging residue liquid is extended from the inlet aperture into another direction and including an angle larger than 0 degree with the former direction. The discharge rib is arranged along the latter direction with a spacing to the inlet aperture. The discharge rib comprises a discharge region for discharging the residue liquid and a dripping region for dripping the residue liquid from the discharge rib. Independent claims are also included for the following: (1) a covering (2) an ice cube producing device.
