Abstract (en)  
[origin: WO2012101372A1] The invention relates to a fluid product dispensing head (T) intended to be joined to a fluid product dispensing member (P), such as a pump, the head (T) forming a dispensing duct (12) which communicates upstream with an outlet (S) of the dispensing member (P) and downstream with a dispensing orifice (31), the head (T) also comprising a closing element (2) for selectively closing the dispensing duct (12), this closing member (2) being able to move along a movement axis in the duct (12) between a closing position and a dispensing position, the head (T) also comprising a pushing element (42) for pushing the closing member (2) in the direction of its closing position, characterized in that the pushing element (42) can be moved approximately perpendicularly and tangentially to the movement axis of the closing member (2).
