Abstract (en)

[origin: WO2012101559A1] An apparatus (10) for making a reinforcement mesh (11'), the mesh comprising a plurality of respective metal longitudinal and transversal members (bars or wires) which are welded, in particular arc-welded, to each other, comprises means for positioning the transversal members (15) of the mesh at the longitudinal members (13) and means for joining the transversal members (15) to the longitudinal members (13) to form a longitudinally elongate mesh (11). The positioning means comprise first means (16) for positioning a first transversal member (15) of the mesh at the longitudinal members (13) and second means (18) for positioning a second transversal member (15) at the longitudinal members (13).
