Abstract (en)

[origin: WO2012101164A1] A case (1) for the safe transport of guns with associated holster which comprises a box-like body (2) constituted by a bottom element (3) and by a lid (4) connected to the bottom element (3) by means of hinge elements (5) for moving the box-like body (2) from an open configuration to a closed configuration and vice versa. The bottom element (3) and the lid (4) are provided with closure means (6) which can engage each other to keep the box-like body (2) in the closed configuration. The particularity of the invention resides in that in the bottom element (3) there is a housing compartment (7) intended to contain a gun (8) inserted in a respective holster (9); means (10) are further provided for the removable engagement of the holster (9) with the box-like body (2) so as to retain the holster (9) in the housing compartment (7). The holster (9), in addition to offering a high degree of protection of the gun during its use on its own, allows, in association with the case (1), completely safe transport of the weapon in a closed compartment.
