Abstract (en)
[origin: WO2012100276A2] The invention relates to spectacles with a frame (1), comprising two spectacle side arms (5) attached laterally to the frame (1), two spectacle lenses (2) that engage in retaining grooves (3) of the frame (1), and a detachable retaining device for each spectacle lens (2) in the retaining grooves (3). In the region of the side arm attachment (4), the retaining grooves are interrupted, wherein in the region of the interruption (7) of the retaining groove (3) the retaining device comprises a push-in bar (8) that is displaceable transversely to the rim (9) of the spectacle lenses (2) and mounted on the outer face of the frame. In order to ensure a secure hold of the spectacle lenses (2), according to the invention the frame (1) comprises on the inner side thereof opposite the push-in bar (8) a support stop (11) for the spectacle lens (2), having at least one detent (12) engaging in a snap-in recess of the spectacle lens (2).
