Abstract (en)
A sunshade (12) includes a pole (111) rotatably receiving a screw rod (295) that is can be rotated by operating a handle (213) to cause movement of a follower (277) in the pole (111) between a folded position, an unfolded position, and a tilted position. A runner (297) is mounted around the pole (111) and fixed to the follower (277) to move therewith. A pivotable member (383) is pivotably connected to a fixing member (363) fixed on an upper end (113) of the pole (111). Ribs (451) are pivotably mounted to a hub (439) fixed on the pivotable member (383). Stretchers (313) are pivotably mounted between the ribs (451) and the runner (297). The hub (439) and the ribs (451) are tilted when the pivotable member (383) is pivoted due to movement of the follower (277) from the unfolded position to the tilted position.
