Abstract (en)

The present disclosure relates to a connection member (1) for removably mounting a flexible sheet (93) on a pole (92). The connection member (1) comprises a tubular body (2) which can be associated with the flexible sheet (93) and has a tubular cavity (20) that has a passage cross-section and is adapted to receive a length (921, 922) of the pole (92). The connection member (1) has an interference portion (21) which forms a narrowing or an occlusion of said passage cross-section of the tubular cavity (20). The interference portion (21) is intended to go resting on a transverse region (925) of the pole (92). In a mounted condition, the interference portion (21) interferes with the pole (92) to block a relative movement of the connection member (1) with respect to the pole (92) along a first direction and to allow a relative movement along a second direction opposite the first direction. The disclosure refers also to an assembly (10) comprising a flexible sheet (93) and a connection member (1), to a gate (9) for a skiing sport and to a method for making a gate (9) for a skiing sport.
