Abstract (en)

[origin: EP2669044A1] The system has a holder assembly comprising a tool support (30) and a machine support, where the supports are arranged at a tool shaft and a plate tool, respectively. A rotary synchronization outer circumferential contour (40) and a rotary synchronization inner circumferential contour comprise circular base contours. Rotary synchronization bevels (42) engage the outer contour into the inner contour. A rotary synchronization projection (43) is provided between the bevels and extends along a portion of the outer contour for intervention into a rotary synchronization recess between the bevels. The system comprises a hand-held machine tool that is designed as a grinder or a polishing apparatus. Independent claims are also included for the following: (1) a hand-held machine tool (2) a plate tool.
