Abstract (en)

[origin: EP2669423A1] The device has a treatment chamber for receiving a dried material. A fan generates the process air flow, which is guided to and/or from the treatment chamber through an air duct. An aperture (37) is formed in the air duct. A container is insertable into the aperture. The container receives and dispenses fragrance. The aperture is lockable in an airtight manner by using a closure device (49), which is associated with the container. The aperture is partially surrounded by an edge projected out from an aperture plane.
