Abstract (en)
[origin: EP2669452A2] A safety device, for door, window, door-window handles and the like comprises a plate substantially contoured to correspond to a profile of a handle base, associated to a door-window; said plate including a throughgoing hole therethrough a handle pivot pin can extend, and a recess for a rotary body including a shaped hole, corresponding to the pivot pin shape; said safety device comprising moreover a locking element having at least two operating positions: a closed operating position thereat it prevents the handle from rotating, by interfering against the rotary body profile, and an open position, thereat the locking element does not hinder the rotary movement of the rotary body thereby allowing the handle to rotate.
