Abstract (en)

[origin: WO2012104212A1] The invention relates to a pole basket (8) for a ski pole, cross-country pole, trekking pole, Nordic walking pole, or hiking pole, in particular for a ski pole for the touring sector, wherein the pole basket (8) has a planar basket region (9, 11, 15). The pole basket is characterized in that the basket region (9, 11, 15) can be folded in a folded state at least in some regions in the direction of a pole tip (5, 7), and can be opened in the opposite direction to a stop, at which the basket region forms a flat or only unsubstantially curved plane, and that the pole basket (8) is transferred into the folded state by a force acting on a upper face of the basket region (9, 11), and that the pole basket returns to the open state independently when said force is removed.
