Abstract (en)
[origin: WO2012104358A1] The invention relates to a distributor block (10), comprising at least one connection side (12) with a first and a second connection point (14, 16) provided thereon, the first and second connection points (14, 16) permitting the detachable connection of an electrical conductor, a fixing part (32) that can be moved relative to a lower side (30) of a clamping body (24) and serves as the site of the first connection point (24), and an intermediate space that remains between a stop and an upper side of the fixing part (32) and serves as the site for the second connection point (16). According to the invention, a rectangular insertion opening (22) for connecting flat conductors is provided for the second connection point (16).
