Abstract (en)
[origin: EP2671465A2] The apparatus (1) has a housing (2) that contains an electric motor and a gear train that is driven by the motor. An epilation cylinder (4) is rotatable about a depilation axis (Delta) that is provided parallel to a plane of a skin to be treated. A massaging element (7) i.e. bar, is in contact with the skin. A drive wheel is driven by the gear train. A bi-processing block (8) incorporates the messaging element and the epilation cylinder. The bi-processing block is interchangeably mounted on the housing of the apparatus.
