Abstract (en)
[origin: EP2671683A1] The compressor has an actuator actuated for varying distance between supporting elements for tensioning a helical spring or a spring damper. One of the supporting elements includes two holding elements that are engaged with an upper spring plate and/or a spring coil of the spring. The holding elements are connected with the actuator relative to each other, and a pressure plate (1) axially supports the holding elements at the plate and is detachably connected with the holding elements. The pressure plate is engaged with the plate.
