Abstract (en)
[origin: EP2671685A2] The system has a breadboard that is provided with several openings (9). An object holder (1) is provided with a base plate (3) and an object holding portion. The base plate is configured for hooking into the openings of a grid plate. A fixing element is reversibly transferred from a first position inserted into the coinciding openings in a second position, in which form-locking grid plate is connected with a specimen holder.
