Abstract (en)

A machining center (10) for machining beams, particularly for machining wood beams and the like, of the type comprising a loading roller conveyor (11) for a beam (100) to be machined, a portal (12) which supports the means (13) for machining the beam (100), and an unloading roller conveyor (14) for the machined beam. The means (13) for machining the beam (100) comprise a cutting assembly (15) which is supported by means (16) for its preset movement on two axes (X, Y), the cutting assembly (15) comprising two rotating tools (17, 18) which are not aligned and are moved by the same motor means (19); the two tools (17, 18) are supported by corresponding brackets (20, 21) at such a mutual distance as to allow one tool (17) to machine a face (102) of a beam (100) along its entire length (L1) without the other tool (18) touching that beam (100).
