Abstract (en)

[origin: EP2671698A1] The installation has a grid (1) including a series of longitudinal sections (2) that is spaced from/to each other in a lateral manner. The longitudinal sections are rigidly attached to each other. A prestressed cable (7) is intended to be placed between the longitudinal sections. A set of guiding teeth (16) is rigidly attached with the grid. The teeth are attached to each other by a main cross-piece (14). A comb (8) is movable in translation longitudinally with regard to the sections without interfering the cable.
