Abstract (en)
[origin: EP2672015A1] The invention relates to a retaining module (1) that can be used as an auxiliary retaining and securing element in the construction and conservation of embankments, levelled ground, walls, etc. and, more generally, for building different types of constructions. The module (1) is essentially in the shape of an L having a long segment (2) and a short segment (3) that substantially form a right angle, the connection therebetween being reinforced with a chamfer (4). In addition, the base (5) of the long segment (2) has a rough texture in order to increase friction with the earth
