Abstract (en)

[origin: EP2672030A1] The device (1) has an actuator element (4) for actuating a drain valve in a flushing tank and actuated with an actuating key (3) i.e. planar plate. The actuating key is moveable preferably pivotable from an original position into an end position with respect to a mounting frame (2) during flushing. A mechanical pressure point element (36) provides resistance perceptible by the user during certain pressure on the actuating key from the original position towards the end position, where the resistance overcomes during increasing actuating force. The point element comprises rigid locking elements.
