Abstract (en)
[origin: EP2672048A2] The arrangement (1) has a moving element linearly and movably guided in a guide rail (4), and a locking element i.e. detent, fixedly connected with the moving element. A locking device locks and releases the locking element opposite to the guide rail. A lever (5) is torque-proofly connected with a driven shaft (7) and rotatable with the moving element. An elongation part is fixed between the moving element and the locking element. The elongation part is prolonged such that the driven shaft is arranged between the moving element and the locking device in a closed state of a door leaf.
