Abstract (en)

[origin: EP2672191A1] The drain pan (20) has a nozzle (226) for discharging condensates, where the pan is made of molded synthetic material. A planar support surface (S206) is provided for supporting fins (104) and end plates (106, 108) of an air-water exchanger (10), where drain channels (208, 210) are provided with inclined bottoms (212, 214) relative to the planar support surface in a plane direction of a temporary condensate storage volume (218) connected to the nozzle. The channels are placed on both sides of the planar support surface. An independent claim is also included for an air treating apparatus.
