Abstract (en)
[origin: WO2012097778A2] The invention relates a device for cleaning a human body. The aim of the invention is to provide a personal cleaning system which ensures cleaning of the person to be cleaned at predetermined body areas. In order to achieve said aim, a personal cleaning system having the features of claim 1 is proposed. The features of advantageous developments are specified in the subsidiary claims. The cleaning system according to the invention comprises a scanning unit for determining body dimensions, for example, the girth measurements such as height and breadth of the person to be cleaned, at least two mouldings having a body-size opening, wherein the opening corresponds to a pose, that is, a body position of the person to be cleaned, a conveying unit that conveys the person to be cleaned through the mouldings, wherein at least one of the mouldings contains adjustable spray nozzles, the spacing of which from the person to be cleaned is adjusted corresponding to the body dimensions of the person to be cleaned determined by the scanning unit.
