Abstract (en)

[origin: WO2012107123A1] There is described a vacuum drum (7) adapted to transfer at least one label (2a, 2b) along a given path (P) around a rotation axis (A), comprising: a main body (9) delimited by an outer lateral surface (11) which is adapted to receive label (2a, 2b) to be transferred; and a plurality of air ports (10a, 10b) defined by surface (11) and connectable to a vacuum source (22); vacuum drum (7) also comprises control means (30) configured for selectively connecting, on the basis of a selected format of the label (2a, 2b) to be transferred along path (P), a given number of air ports (10a) to vacuum source (22), when air ports (10a) of the given number are arranged between an inlet and an outlet station (3, 4) of path (P), so as to transfer said label (2a, 2b) along path (P).
