Abstract (en)

[origin: WO2012107923A2] A foldable air blower for drying humid, hanging laundry placed on a laundry hanging device. The air blower comprises an air inlet; a first air conduit unit comprising a bottom air outlet with a plurality of shutters; a second air conduit unit attached to the first air conduit unit, and that can be folded together with the first air conduit unit when the air blower is not in use. One or more legs allow holding the foldable air blower a short distance above hanging laundry. An engine unit sucks air from the outside through the air inlet such that when the foldable air blower is positioned a short distance above the humid, hanging laundry, air is blown from the bottom air outlet into the hanging laundry in order to speed the drying process of the hanging laundry.
