Abstract (en)

[origin: WO2012088560A1] There is shown an apparatus (1) for securing the movement of a rotary handle (4) of a door leaf or window casement (2), having a mounting part (5) which can be mounted on the leaf or casement (2), in particular on the frame (6) thereof, and having a rotary handle securing means (7), the length of which can be set, which can be connected to the handle piece (9) of the rotary handle (4) and is also connected to the mounting part (5), preferably in a form-fitting manner, in order to secure the movement of the rotary handle (4). In order to create advantageous securing conditions, it is provided that, in order to secure the position of the mounting part (5) on the leaf or casement, there is provided a partial mounting securing means (10) which can be connected to the fitting (3), preferably in a form-fitting manner, and is also connected to the mounting part (5).
