Abstract (en)
[origin: WO2012108761A2] The present invention relates to a hot water appliance comprising a heating member for heating water, a control unit for controlling the heating member, the control unit comprising a memory for storing a desired temperature of a space to be heated, and an input/output unit, wherein the input/output unit is adapted to receive a signal representative of a measured temperature, and wherein the control unit controls the heating member on the basis of the desired temperature and the measured temperature.
