Abstract (en)
[origin: EP2674226A2] The method involves applying solution containing polyvinyl pyrrolidone, a radical initiator e.g. photo initiator, organic solvent i.e. ethanol, and hydrogen peroxide on surfaces to be coated of a refrigerating and/or freezing device. The radical initiator is added in a concentration upto 7.5 wt. % relative to an amount of polyvinyl pyrrolidone. The applied solution is hardened by UV exposure. The solution is dried in a room temperature before the UV exposure. The surfaces are made of plasma-activated polystyrene. Plasma activation is carried out with oxygen-plasma or argon-plasma. An independent claim is also included for a refrigerating and/or freezing device.
