Abstract (en)
The invention relates to a notching machine for machining logs at the top, at the bottom and at both sides. The notching machine comprises an upper notching cutter (1), a lower notching cutter (2) and two lateral notching cutters (3, 4). According to the invention, the notching machine has a body (5); a log bracket (6) which is supported against the body and on which the log to be machined can be placed immovably; a rigid frame (8) movable relative to the body in the transverse direction of the log being machined; an upper notching cutter (1) and a lower notching cutter (2) supported by the frame to make an upper notch and a lower notch, respectively, in the log by moving the rigid frame; as well as lateral notching cutters (3, 4) movably supported by the frame to make lateral notches in the log by moving the lateral notching cutters.
