Abstract (en)

[origin: EP2674369A1] The cover (10) has a single-piece base body (12) including a cover plate and a circumferential cover collar extending from the cover plate. A cover collar extends upwards away from a container. A reinforcement ring (14) is connected to the cover collar by a peripheral shroud or skirt. The reinforcement ring is arranged on a side of the cover plate opposite to the cover collar. The ring includes a peripheral skirt forming a circumferential step along the periphery on a radially interior side of the reinforcement ring, and/or a circumferential bead along the periphery. An independent claim is also included for a method for manufacturing a multipart lid from a paper material.
