Abstract (en)
A water container (1) for a water dispenser (100) includes a container body (10) disposed on the water dispenser (100) and an outlet pipe (20) inserted into an inlet port (110) of the water dispenser (100). The container body (10) has an accommodating space for storing water. The container body (10) has plural apexes (11, 12). One apex (11) of the apexes (11, 12) is cut away to form an inclined facet (13). The outlet pipe (20) protrudes from the inclined facet (13) to be in communication with the accommodating space. The length of the outlet pipe (20) protruding from the inclined facet (13) is smaller than or equal to the distance between the inclined facet (13) and the cut-away apex (11). A line connecting the outlet pipe (20) and the cut-away apex (11) passes through the gravity center of the water container (1).
