Abstract (en)
[origin: EP1743994A2] The lock has a multipart nut with two nut halves, and a withdrawal lever engaged at a locking unit for withdrawal. The lever supports a coupling pin, which is loaded by a coupling pin spring in a decoupled position. The locking unit is a latch (6) held by a latch spring (18) in a latch primacy position, and the locking cylinder operation of a sliding bolt (9), which is parallel to the latch, is backwardly locked in a closed position. The nut halves and lever are engaged at a locking unit for the withdrawal. One of the halves is permanently coupled with the lever in a rotating manner.
