Abstract (en)

[origin: EP2674562A1] The door or window (1) has a leaf frame (3) displaced with respect to a blind frame (2). Locking strips (13) are mounted at the blind frame or the leaf frame. A ventilating connection (20) running outside locking strip receptacles (15) is provided between a joint clearance region (18) on a side of the locking strips and another joint clearance region (19) on another side of the locking strips turned away from the former side of the strips. A ventilating cross section of the ventilating connection in a locking position is adjusted by one of the locking strips.
