Abstract (en)  
[origin: EP2674709A2] The apparatus (100) has side walls (106) latched at a housing body (104), where the apparatus is limited to a plastic engine room body (300) by the side walls. An electrically conductive ground tab is provided at the engine room body and in electrical contact with the side walls. The side walls comprise an electrically conductive contact portion, which is in electrical contact with the ground tab. The ground tab comprises a transformed terminal section, which is connected with a ground electrode of the ground. An independent claim is also included for a method for assembling a refrigerating apparatus.
