Abstract (en)

[origin: WO2012112034A2] A system for controlling activation of a plurality of fire extinguishing devices comprises a control panel (110). The control panel (110) comprises a first actuator (240); a second actuator (250); means for activating a plurality of fire extinguishing devices (120) if the second actuator (250) is actuated subsequent to actuation of the first actuator (240); a controller (270) for determining a fault in the system comprising the first (240) and second (250) actuator and the means for activating the plurality of fire extinguishing devices (120) and a bypass path (210) connecting the first and second actuators (240, 250) to each of the plurality of fire extinguishing devices (120) bypassing the logic controller (270).
