Abstract (en)

[origin: WO2012110485A1] The invention relates to a hand-held power tool comprising a drive device in a housing, said drive device being intended to drive a tool accommodated in a tool-accommodating region. An adjusting motion of the hand-held power tool by the user can be detected via a sensor device, wherein a controlled variable for setting the drive device can be generated in an open-loop or closed-loop control device in the hand-held power tool from the detected adjusting motion.
