Abstract (en)  
[origin: WO2012110059A1] A plastic container (1) is described having a pouring spout (10) which can be mounted onto a container neck (2) and has one or more closable pouring openings (11). An inner wall (4) of the container neck (2) has at least one pin (7) which projects beyond the inner wall (4) and is formed in a blow-moulding process. The blow-moulding process can be an extrusion blow-moulding process or a stretch blow-moulding process. The pouring spout (10) has a body (12) which can be connected to the container neck (2) and is formed so as to correspond to a circumferential contour of the container neck (2). A corresponding number of receptacles (15) for the pin/pins (7) are formed in an outer wall (14) of the body (12), which outer wall (14) faces the inner wall (4) which is provided with the at least one pin (7).
