Abstract (en)

[origin: WO2012110179A2] The invention relates to vehicle having a gearbox, a gear control unit and a manually operable selector device, which is electrically connected to the gear control unit and which is provided for selecting different states (R, N, D) of the gearbox, characterised in that a sensor system is provided, by means of which it is possible, on actuation of the selector device, to detect whether the selector device is being actuated by a human body part or in some other way.
