Abstract (en)

[origin: WO2012112604A1] A target system includes a resistive matrix target contacting a substrate and contacting a purely conductive buss to electrically connect the target to the buss. A conductive foil contacts the buss and is folded around the substrate to contact a rear surface of the substrate opposite the target. The conductive foil is electrically connected to the target and provides a buss of a larger surface area relative to the purely conductive buss and provides a more robust buss relative to an impact of the projectile due to the increased surface area.
